New Features

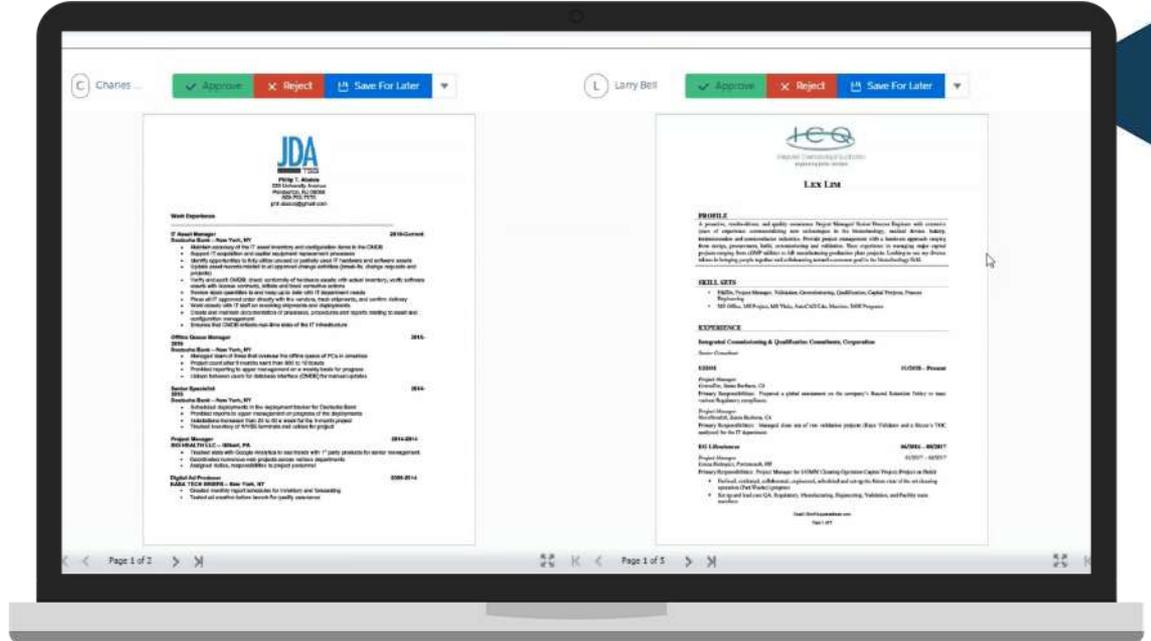

Compare Multiple Resumes

Now you can easily compare multiple resumes side by side. This new feature of TargetRecruit allows you to evaluate resumes with similar skillsets, at once.

You can look at all applicants of a job and analyze them. Just click on “Review Resumes” and preview two to eight resumes in a single screen. Resumes can be approved, rejected or saved for later.

Select the right candidate in no time.

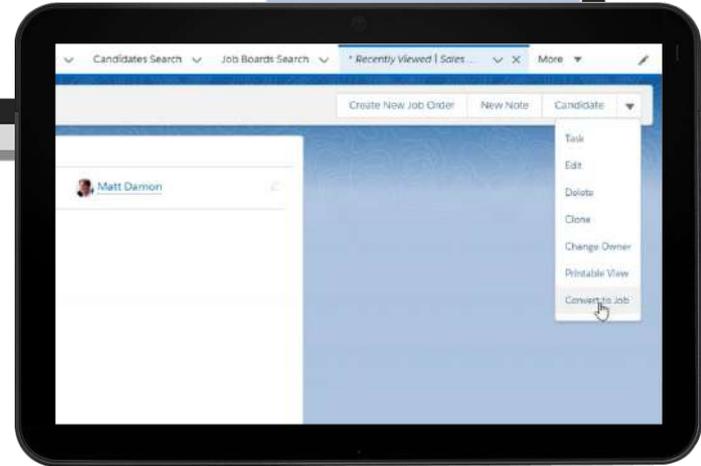

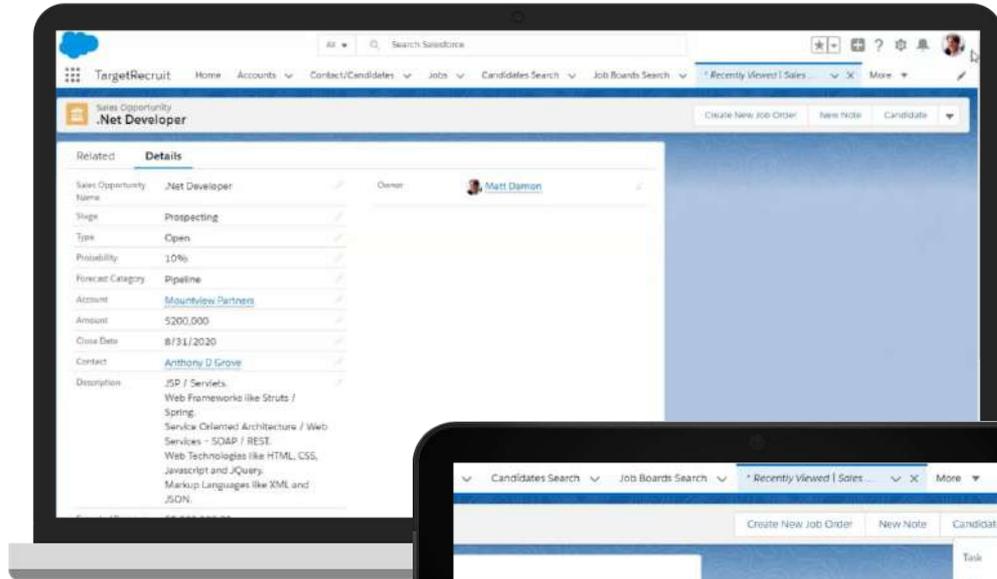

Opportunity to Jobs

The sales team will now be able to convert opportunities to new jobs. This cool new feature is built in such a way that users can create as many jobs as needed, from one sales opportunity.

Just click on "Convert to Job" option and a new job page appears.

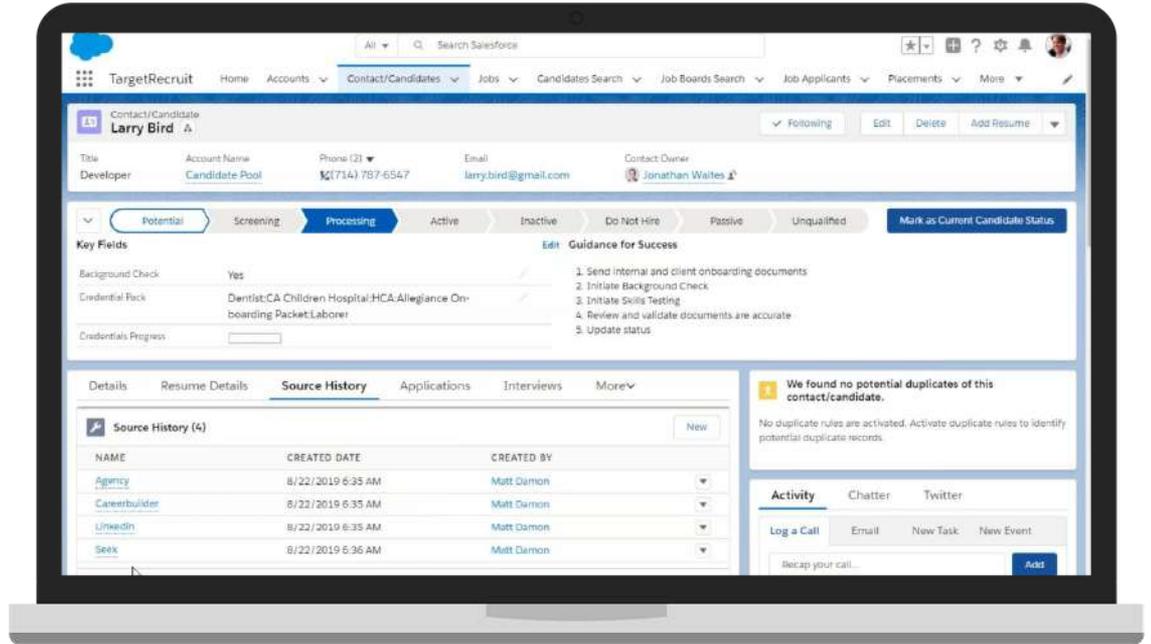

Efficiently manage and report on sales opportunities with this new feature.

History Tracking

Recruiters can now view the historical source of resumes that have been added to your TargetRecruit ATS. LinkedIn, Monster, Indeed... understand the source of a candidate application and where it's coming from so you know where to spend your sourcing dollars.

Do not waste any more time in tracking the source of your applications.

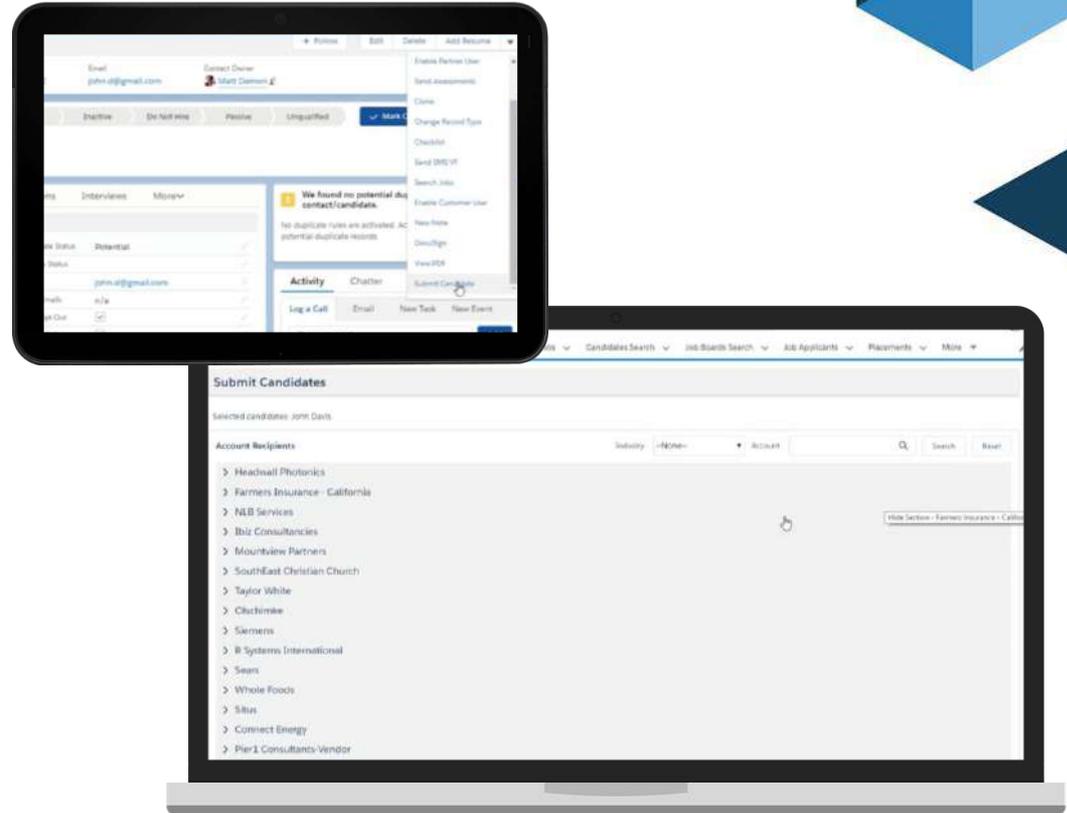

Submit Candidates to Clients in a Click

Whether you are searching candidates or are looking at a candidate profile, you can submit a candidate to any open job of any client.

With this submit candidate feature of the TargeRecruit ATS, you can quickly submit any candidate to multiple accounts wherever there are relevant open jobs.

Submit a candidate profile to one or more clients in one view.

Enhancements

Set Password for Client Contacts

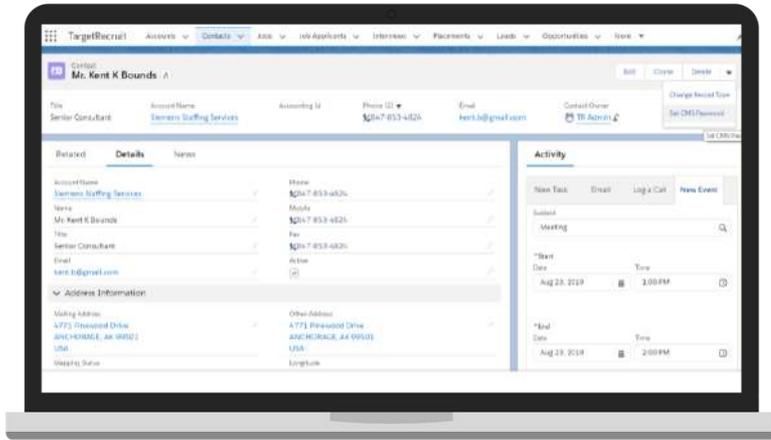

Now you can set passwords for all portal login users. For every client contact created, you can create passwords using the “Set CMS Password” option on their profile, which can then be used by clients to log into their customer portal.

Custom Sort

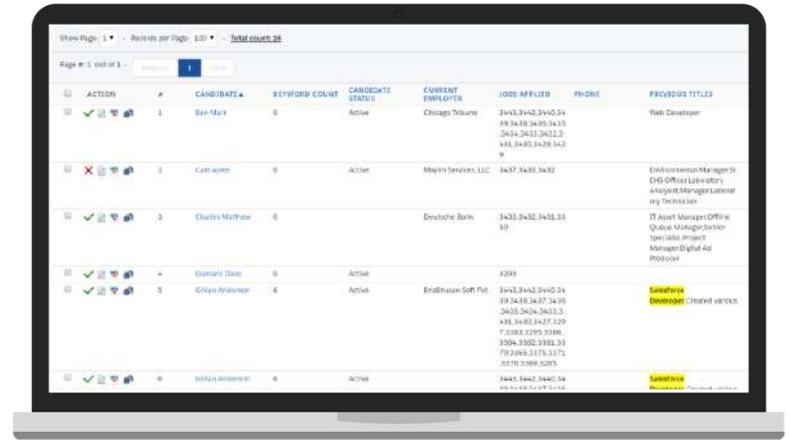

Recruiters can now define the sorting order of a candidate search. By default, candidate search is sorted in the alphabetical order of candidate names. With this new feature, sorting order can be done multiple ways.

Email Opt-out

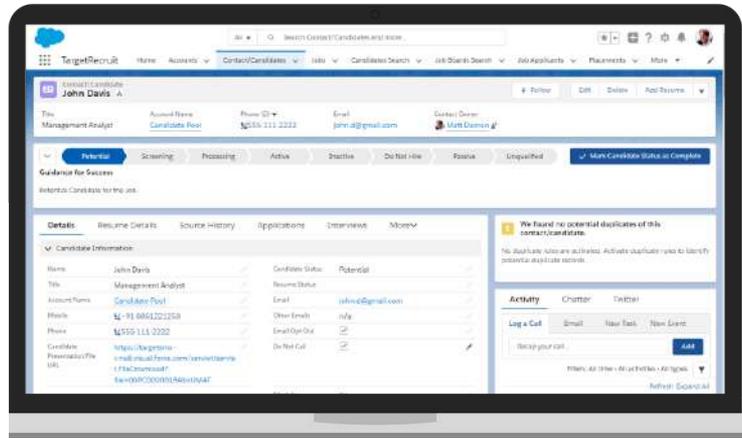

If a candidate is not interested in receiving emails or you do not intend to send any further communication, you can now enable the Email Opt-out checkbox on his profile. This will make sure that the candidate doesn't receive any notification or promotional emails.

Set CMS Password

Email Opt-out

Mobile Responsive and Customizable Portals

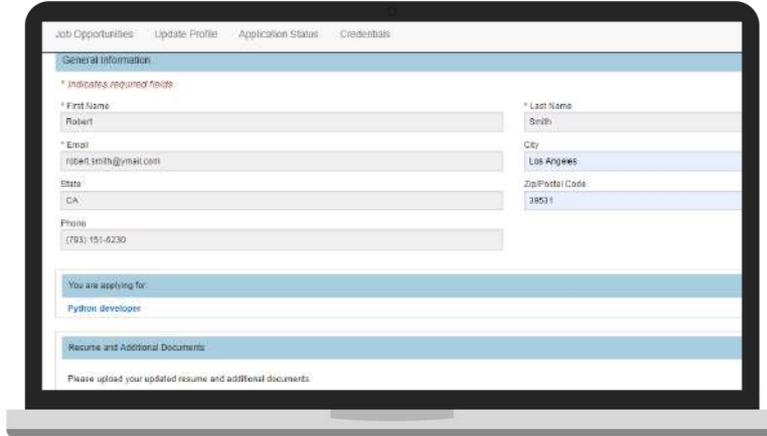

With our new mobile responsive portals, all of the content will automatically adapt to a layout specifically optimized for the screen size, making them fully mobile-friendly. Portals are now even more customizable as well. So, change colors, add logo's and other branding elements to enhance the experience.

Import LinkedIn/ Indeed Profile URLs

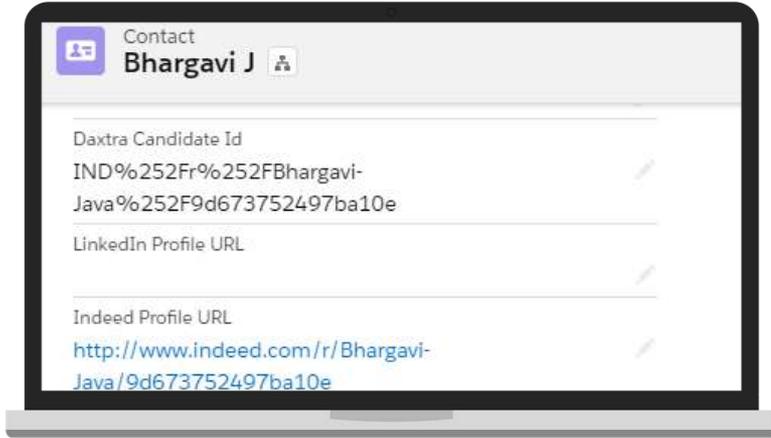

When you import candidates or job applicants from a job boards search, their candidate profiles will now have their LinkedIn or Indeed URLs as well. This way you can access their complete information on LinkedIn or Indeed anytime.

Auto-Generate Approved Timecards

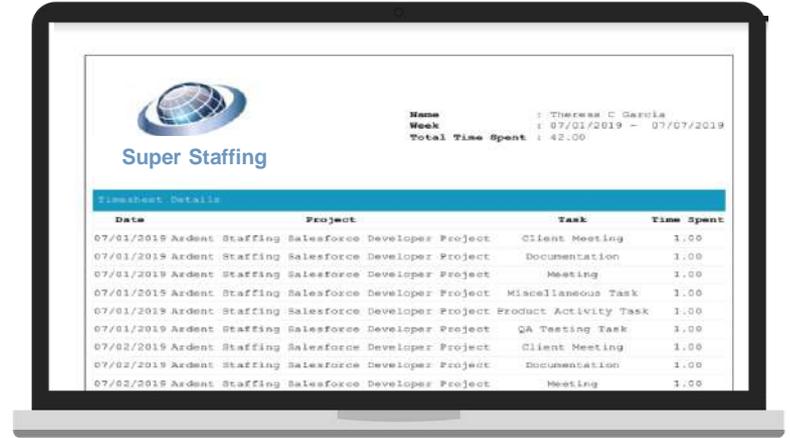

Every time a timecard is approved, it will auto-generate a PDF including time card records, approver name, approval date, etc. All the details related to receivables get auto-attached if an expense category is marked as billable.

Mobile Responsive and Customizable Portals

Integrations

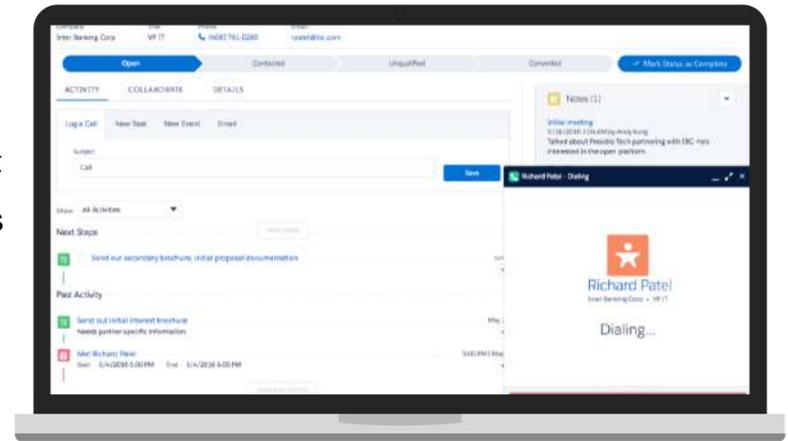

Leading Software and Telecommunications Solution

CloudCall helps more than 22,000 staffing, recruiting and sales teams boost their productivity by tightly integrating their phones into their CRM and ATS solutions. Visit www.cloudcall.com for more details.

Highlights

- Now integrate phone communications directly into TargetRecruit
- Optimize your business relationships with candidates and clients
- Easily access call functionality and associated data
- Increase productivity and reduce manual errors.

Bug Fixes

- *Issue with Manage CMS Site Setup:* Users used to encounter an error upon clicking Setup on the CMS Site Setup page. This issue has been fixed with this release and the Setup proceed further successfully.
- *Forgot password notification for non-existing users:* This was a notification error for user IDs that couldn't be found in the database. Whenever a user clicked on forgot password and entered a non-existent user ID, an error message was displayed. This has been fixed and a correct message is now displayed.
- *Duplicate username detection in CMS:* Whenever a user would try to create a CMS profile for an existing candidate, an error message was displayed which was confusing. Now a correct notification is displayed informing the candidate that the user name already exists.
- *Formatting issues* in the Job Description rich text field for the Lightning version have been fixed as well.
